

Trinity Technologies Integrates Informative Graphics' Brava and Redact-It Software with Legal ISE Suite

Partnership Supports EMC Documentum-Based Proactive Records Management, eDiscovery and Redaction for Legal, Financial, Utilities and Pharmaceutical Industries

SCOTTSDALE, Arizona – March XX, 2009 -- Informative Graphics Corporation (IGC), a leader in [viewing, collaboration and redaction technology](#), today announced an integration partnership with Trinity Technologies. Trinity Technologies, a leader in configuring, integrating, customizing and implementing content management systems, has integrated IGC's Brava!® and Redact-It® Enterprise products into its Legal ISE™ suite.

The expanded offering delivers enterprise-wide management of electronic records with advanced document viewing, annotation, publishing and automated batch redaction. With the inclusion of IGC's technology, Legal ISE now eliminates the need for manual reviews typically outsourced to service firms. This results in greater peace-of-mind, and reduced legal risks and costs.

"As leaders in their respective fields, both Informative Graphics and Trinity Technologies will win from this relationship," said George Socha, founder of Socha Consulting. "Fast and accurate document review is in large part what defines a highly competitive offering among electronic discovery solutions. The product suite resulting from this relationship raises the bar for others seeking marketshare in this growing arena."

Legal ISE is a comprehensive records management and legal discovery platform, deployed exclusively as part of the EMC Documentum Enterprise Content Management (ECM) Suite. The system provides eDiscovery and proactive records management for defining compliance requirements, and configuring and implementing solutions. Legal ISE provides enterprise-wide management of electronic records, substantially reducing

legal risks of non-compliance and litigation through improved security, control and efficiency.

IGC's category leader Brava offers advanced multi-format, Windows-based viewing of documents, images and CAD files from popular applications like Word, Excel, and AutoCAD, as well as print-capture formats like TIFF, PDF, XPS, DWF and CSF. Both Brava and Redact-It provide intelligent redaction, automatically removing sensitive content through user-defined policy-based controls. Additionally, IGC's Visual Rights® technology provides persistent document security with embedded usage controls for authorized document access, even outside the company.

"By incorporating Brava and Redact-It into our Legal ISE suite, we have created a comprehensive offering for review, classification and redaction for proactive discovery and records management," said Joseph P. Morray, Jr., president of Trinity Technologies Corporation. "The bottom-line benefits of this integration will bring proactive records management from the back room to the boardroom."

"We are very pleased to partner with Trinity Technologies and look forward to a successful relationship in delivering unmatched value to customers," said Gary Heath, CEO of IGC. "By incorporating Brava and Redact-It into the Legal ISE suite, Trinity customers can achieve maximum benefit while eliminating the legal risk and financial drain of manual eDiscovery and electronic redaction processes."
