

TrinityBRIDGE: Data Transfer and Content Management Solution from Trinity Technologies

TrinityBRIDGE™ is a powerful, yet easy to use, utility for migrating data between different systems. The utility uses a drag-N-drop metaphor to “build” the migration process on what is referred to as a “map”. The process includes Input, Validation, Transform, and Export functions.

Input Functions allow you to read data and content (if applicable) from many different systems or data sources. Data Sources such as RDBMS(Oracle and SQL/Server), Exchange, Outlook, Excel, MS-Access, Primavera, Documentum, and Sharepoint.

Validation functions allow you to “design” validation rules, using the GUI, to apply against the input data. Simple and complex validation rules can be applied

Transform functions allow you to “design” transformation rules, using the GUI, which will transform the input data model to the output data model.

Transform includes:

- direct mapping of data from one input-attribute to an output-attribute
- merging of multiple input-attributes to an output-attribute
- complex mapping of input-attribute to output-attributes, including data dictionary lookup and programmatic rules

Export Functions allow you to write data and content (if applicable) to many different systems or data sources. Data Sources include RDBMS(Oracle and SQL/Server), Excel, MS-Access, Documentum, and Sharepoint.

**TrinityBRIDGE is powered by DataSlave™*

Developing a map is as easy as using drag-N-drop and does not require custom programming. Execution of the map performs the migration and can produce both success and failure reports.

Executions can be performed both interactively as well as in batch-mode (in the background). Also, it is scalable so that it can easily handle large data transfers.

Transfer to and from Documentum can handle not only metadata but also content. In addition, it also handles renditions, virtual documents, built-in and custom attributes, relationships, and versioning.

TrinityBRIDGE is a great tool for migrating data from Microsoft Exchange and Sharepoint into EMC's Documentum. Since it is completely configurable, data migration can be accomplished from any third-party or custom application.

We make technology work.

About Trinity Technologies

Trinity Technologies is a leading business consulting and technology services company specializing in the configuration, customization and implementation of the Documentum content management system. We provide valuable solutions for the process, power, energy, chemical, financial, legal, and pharmaceutical industries. Our primary goal is to assist your company in deriving the ultimate profit from investments in information systems.
